RE:

Primary Exporter Annual Report

Lamp Environmental Industries, Inc. (LEI)

46257 Morris Rd Hammond, La 70401 LA0000365668

Dear Mr. Heiss:

Please find attached a report summarizing the types, quantities, frequency, and ultimate destination of all hazardous waste exported during the previous calendar year in conformance with 40 CFR 262.56 and 262.87(a).

If you have any questions or concerns, please feel free to contact Landyn Oller at (985)345-4356.

Sincerely,

Landyn Oller

Compliance Manager

Protecting Your Company. Safeguarding Our Environment.

CO-124-REF-7-LEI Waste Minimization Plan

Policy Statement:

LEI is committed to actively seeking ways to reduce the amount and toxicity of waste generated by operations at our facility.

Objective:

This plan has been created to safeguard the community and environment, as well as to ensure compliance with our RCRA permit, which mandates our facility to have in place an economically feasible program to reduce the volume and toxicity of hazardous waste generated by operation.

Applicability:

The LEI Waste Minimization Plan applies to all operations at the facility in which there is a potential for hazardous or solid waste to be produced. Because LEI is a universal and hazardous waste recycling facility, the actual volume of waste entering the facility may increase with improved sales of our service. This may cause a subsequent increase in the outflow of wastes that we process, sort, or consolidate as a service to our customers. LEI will make every effort to recycle these wastes and ensure that hazardous waste does not harm people, the environment, or property.

Where it is feasible, records will be monitored for comparison of monthly inflow and outflow of certain waste streams. Every effort will be made to recycle the maximum amount of waste material that is economically feasible. Due to the nature or toxicity of some waste materials, recycling may not be an option.

Methodology:

Implementation of the waste minimization plan is currently underway. Monitoring and measurement programs are implemented as part of our ISO 14001 Environmental Management System to help track the volume of waste being recycled relative to the amount of waste being received. Also, annual audits and reviews are conducted to identify areas where waste is occurring and can be minimized or eliminated. Our Employees are a key resource in identifying potential areas of improvement. Employee suggestions are submitted formally or anonymously via in-house forms and collection boxes/bins.

Current Projects:

The following projects have been implemented to minimize waste created by LEI:

- Reusing and Recycling of all paper and cardboard waste
- Recycling of post-process lamp components (aluminum, mercury, rare earth metals)
- Recycling of Non-PCB ballast components
- Recycling of PCB and Non-PCB transformers
- Reclamation of mercury from mercury devices and contaminated debris

4

- Recycling of computer and electronic components
- Recycling of post-consumer batteries (all types)
- Analytical monitoring of post process lamp components, used PPE, used air filters, and facility perimeter soil for mercury content

Ongoing Projects:

LEI has the following ongoing programs to minimize waste generated at the facility:

Project

- Monitoring and measurement of outgoing paper / cardboard wastes
- Monitoring and measurement of outgoing plastic wastes
- Monitoring and measurement of outgoing phosphor powder
- Yearly/monthly data tracking of outgoing post-process aluminum, scrap metal, and glass
- Monthly tracking of energy consumption (vehicle fuel and electricity)
- Yearly/monthly data tracking of outgoing mercury debris (for retort or recycle)
- · Yearly/monthly data tracking of sorted batteries

CO-166-REF-7-Annual Certification Of LEI's Waste Minimization Program

LEI has a waste minimization program in place to reduce the volume and toxicity of hazardous wastes generated by the facility's operation to the degree determined by LEI to be economically practicable; and the proposed method of treatment, storage, or disposal is that practicable method currently available to LEI which minimizes the present and future threat to human health and the environment.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision according to a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.
